FOR IMMEDIATE RELEASE

NATIONAL GLASS ASSOCIATION UPGRADES ITS BUSINESS APPLICATION SOFTWARE TO APTIFY'S 4.0 VERSION

Washington, D.C. (September 28, 2007) – National Glass Association (NGA), the leading trade association representing the flat and auto glass industry, announces that the company has successfully migrated from Aptify's 3.0 version of its business application software to version 4.0.

Marc Doggett, NGA Information Technology Director says, "We made the right decision when we came onboard with Aptify 3.0 over four years ago."

Aptify is a leading international provider of customer and member relationship management, e-Business, education management and other applications.

Recent growth in the certification segment of NGA's business resulted in the decision to upgrade to Aptify's 4.0 version. Doggett says NGA wanted to implement the most current release of Aptify's software before investing in further system developments. That meant migrating to version 4.0, which is based on the .NET platform. The change to .NET offers significant enhancements that are especially useful when it comes to leveraging applications for web use.

Aptify 4.0 features an upgrade toolset, which helps to streamline the migration process. The software also includes a mechanism to identify, package and deploy all configurations from one version of the software to the next. This is critical to the upgrade process, especially if the system has been reconfigured in any way. More importantly, this unique technology simplifies the upgrade process of the Aptify software.

Doggett says upgrade tools were a key factor in the success of their migration, "As a result of the upgrade to version 4.0, we are now able to leverage the most current Microsoft technologies, including SQL 2005 and .NET, our data is consolidated and centralized, and it's easier for us to link up with external databases."

Amith Nagarajan, Aptify CEO says, "We are pleased to see NGA upgrade so seamlessly to our latest release. Aptify 4.0 includes tremendous functional enhancements that NGA can immediately benefit from. We are excited about the close partnership NGA has formed with our team and look forward to their many future successes."

NGA uses Aptify as its enterprise-wide business information system for managing their membership database to certify and track glass installers, manage events and sell products.

"Our users are very happy with the myriad of new enhancements in the core product, including Aptify's Web Access," says Doggett. "Our next projects include implementing the e-Business suite and shopping cart functionality."

About National Glass Association

Founded in 1948, the National Glass Association is the largest trade association representing the flat (architectural and automotive) glass industry. The organization represents nearly 4,000 member companies and locations, and produces industry-leading events and publications.

NGA helps industry professionals through education and training programs that raise the level of quality workmanship and offers certifications in auto glass replacement and repair. The organization also helps consumers by acting as a resource for everything from finding professionals to providing information on the latest issues and trends.

About Aptify
