

Exchange Online Advanced Threat Protection (ATP)

A new email filtering service that provides additional protection against specific types of advanced threats, including Ransomware & Cryptovirus!

Benefit 1. Real time, time-of-click protection against malicious URLs

Attackers sometimes try to hide malicious URLs with seemingly safe links that are redirected to unsafe sites. ATP's Safe Links feature proactively protects your users if they click such a link. That protection remains every time they click the link, as malicious links are dynamically blocked while good links can be accessed.

Benefit 2. Protection against unknown malware and viruses

Exchange Online Protection (EOP) employs a robust and layered anti-virus protection powered with three different engines against known malware and viruses. ATP extends this protection through a feature called Safe Attachments, which protects against unknown malware and viruses, and provides better zero-day protection to safeguard your messaging system.

Benefit 3. Rich reporting and URL trace capabilities

ATP also offers rich reporting and tracking capabilities, so you can gain critical insights into who is getting targeted in your organization and the category of attacks you are facing.

Frequently Asked Questions:

- Q.** What is the price?
A. \$2.40/user/month. You can add it to any subscription that includes Exchange Online.
- Q.** Can I use Exchange Online ATP for part of my organization, or do I need to use it for everyone?
A. You can assign ATP to everyone or to a specified group of users.
- Q.** Can on-premises customers use ATP?
A. Yes, so long as they already use EOP for inbound email filtering.
