Lessons from the Sunwing Security Incident

Sunwing was the victim of a form of supply-chain attack in which one of their software providers was compromised, which led to impact to Sunwing customers. This can happen to you.

4 Ways You Can Prepare in Advance:

1	2	3	4
Understand the risk of each of your software vendors if they were to be compromised	Ask those vendors specific questions about their cybersecurity practices and risks	Identify possible backup processes and work arounds for your critical operations	Identify your crisis response team and develop a communication plan

People Matter.   Be Like Gumby.   Do It Right.
