Shadow IT Assessment

Consider the following:

- An employee downloads Dropbox so they can work on a document at home.
- Two of your employees use Google Drive to co-author a document.

When you look at these two examples, it's clear that Dropbox and Google Drive certainly aren't evil or nefarious. But they are examples of Shadow IT. Why? Because *your IT Department isn't aware that they've been introduced into your organization!*

What Is ProServeIT's Shadow IT Assessment?

Most of the time, your employees are just trying to make their jobs easier in some way. But Shadow IT does have the potential to be harmful because your IT department doesn't know it's there. Thus, they're not monitoring how secure those applications are, where those applications fit into your IT infrastructure, and what data is being shared.

Using your current Azure AD license*, ProServeIT will run Microsoft Cloud App Discovery, which will show you what Cloud applications are currently in your environment and assign a level of risk associated with these apps. With this Shadow IT Assessment, you'll be able to pinpoint whether or not there is any Shadow IT currently in your environment and determine what you want to do about it.

*In order to get full functionality from the Shadow IT Assessment, an Azure AD license will be required.

Deliverables & Activities

After running the Shadow IT Assessment in your organization, ProServeIT will:

- Help you understand what Shadow IT is running in your organization and what risk level they pose for your overall security posture.
- Develop a risk profile for your organization.
- Help you to develop a plan around various tools or processes that you need to put in place in order to reduce your risks.

Let ProServeIT Help You

Eliminate concerns over unauthorized access to corporate data.

Understand possible data leakage points and other security risks inherent to Shadow IT.

Identify users within your organization who are using Shadow IT.

Build a plan to educate employees on the dangers of Shadow IT.

Build a plan to mitigate Shadow IT in your organization and prevent future instances.
