

Ryan's Story

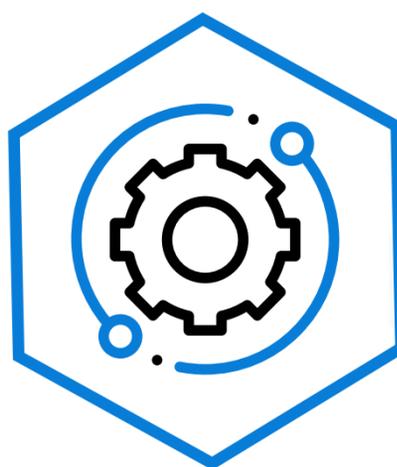

Ryan's been working as a Business Development Manager for a large Economic Development firm in the Waterloo Region for 10 years.

Since COVID-19 hit, most of his work of trying to attract Foreign Direct Investment into the Region has been put on hold - many of his clients prefer to travel to the area before they'll invest, and the pandemic has made travel both difficult and hazardous. But that hasn't stopped Ryan.

His company implemented several technology changes that has allowed him to not only seamlessly switch to a remote working environment, but has actually increased his productivity! He's been able to add more deals to the pipeline in the last five months than he had the previous year.

Ryan wants to remain working from home, but is interested in finding ways to increase productivity even more.

To help Ryan and the other Business Development Managers maintain their productivity, Ryan's company decided to implement some additional solutions that would integrate well with their current Office 365 set-up.

signNow

Starting at \$8.00/user/month

signNow, a cost-efficient e-signature solution allows remote employees to safely manage and e-sign documents from any device they use. With full integration with all the major productivity tools like Office 365, signNow streamlines the e-signature process and speed up document turnaround time. [Start a free trial here.](#)

Teams Data Integration and Automation

Starting at \$1,500 CAD

Already implemented Microsoft Teams to enable and empower your remote workforce? Why not go one-step further with Teams? You can integrate your data and automate tedious manual processes. For example, a document approval process can be automated. All you need to do is to upload a document to Teams and it will do the rest. You will be notified when the document is review and approved by the responsible parties. [See the details here.](#)

Teams Voice

\$5,000 CAD

With adopting Microsoft Phone System and Calling Plans, you can switch to Voice-Over Internet Protocol (VoIP), allowing you to make calls over the Internet (instead of a regular phone line). This reduces costs and maintenance requirements and introduces work-from-home or remote office capabilities into your organization.
